AQUA-VIVOS

**The “Water of Life”
“AquaVivos – Enzymatic Water Enhancer” is
proprietary drinking water enhancement
formulation “AquaVivos”. So what makes
“AquaVivos” so special?**

Please read on to find out why.

The human body is a true marvel of engineering – a complicated, interrelated system that is wonderfully resilient. Consider that the average human adult body is composed of over 70 TRILLION individual cells. Some cells form complicated organs such as the brain, heart, kidneys and liver. Others form bones, ligaments, muscles, nerves and cartilage. At the “heart” of each of your 70 TRILLION cells is an individual structure called Deoxyribonucleic Acid, or DNA for short, which is unique to you alone. The DNA carries the genetic information that makes up your entire body. It is composed of double-helix shaped protein strands found deep within the nucleus of each individual cell. String the DNA strands from all of your cells together end-to-end and the resulting chain would circumnavigate the globe over 500 million times! Such a tremendous and marvellous organism should last much longer than a mere 90+ years!

Your body is literally a heat-generating machine. Oxygen, a flammable gas, is needed by the cells to generate energy and perform the basic metabolic functions every second of every minute of every day. As the oxygen molecule is utilized by the cells, oxygen electrons are consumed and the “by-product” produced is an unstable oxygen molecule that is now lacking one or more electrons. This unstable oxygen molecule then becomes an enemy to the cell and is called a “free radical”. You see, one of the primary sources of free radicals is the cell itself. Additional free radical ions enter the body from such things as cigarette smoke, processed foods, toxic chemicals and even substandard drinking water. There is little doubt that reducing and even eliminating free radicals on the cellular level will greatly increase health and longevity.

To reiterate, free radical molecules are very chemically unstable and cause cellular aging because they are missing electrons. As the free radicals seek to regain their lost electrons, they of necessity attack healthy cells in order to steal their electrons. Sometimes, these free radicals target enzymes or vital protein chains within the cells. Often times, they

damage DNA strands in the nucleus after damaging the cellular membrane itself. It has been conservatively estimated that each and every one of our 70 TRILLION cells experiences over TEN THOUSAND free-radical hits each day! So the question is - “Is it possible to reduce the free radical hits to only a thousand or even less each day?”

Yes indeed, it is not only possible but easily achievable to do so with a very potent anti-oxidant supplement. We believe that “AquaVivos” may well be that supplement.

“AquaVivos” is a highly concentrated mixture of vegetable phytonutrients called Polyphenols. Through a proprietary process, these powerful vegetable antioxidants have been electromagnetically “activated” to produce “free electrons” through increased micelle polarity.

“AquaVivos” polyphenols (also called lysozymes) are actually concentrated vegetable-extracted colloids called micelles that measure approximately 1 ten-millionth (1/10,000,000) of a centimeter in size. Nano-technology has discovered that the biological activity of these amazing colloids is completely electrical in nature. Like mini planetary globes, each micelle has two electro-magnetic poles, one exhibiting a positive electrical charge, and the other an opposite, negative charge. This electrical differential produces a constant, measurable, micro-electrical charge that remains in perpetual motion when added to water – primarily because one pole of the micelle is hydrophilic (having an affinity for hydrogen in water) and the other pole is hydrophobic (or repels hydrogen).

Amazingly, these electrically charged particles continue to constantly repel each other in a ceaseless random orbit and movement resulting in the hydrogen ions in water becoming “supercharged” with free electrons that neutralize free radicals. As a result, the hydrogen ions in the “treated” water become much more powerful “reducing” agents, helping the individual animal and plant cells to more effectively absorb nutrients,

remove toxins (especially hydro-carbon petrochemical agents), destroy pathogens and parasites, while producing energy. In short, "AquaVivos" may be one of the most important nutrients available anywhere because it may help the cells to HYDRATE more effectively as it neutralizes harmful free radicals. Since most chronic and degenerative diseases are definitively linked to FREE RADICAL and DEHYDRATION factors, any supplement that both increases cellular hydration while working as a super anti-oxidant is of extreme value.

Contaminants in water that act as free radicals are quantified and identified as totally dissolved solids, or TDS. Studies have shown that TDS particles are naturally attracted to the micelles in "AquaVivos" by what might best be described as an electromagnetic "force field". When the electrical attraction of the micelles is greater than the force holding the TDS particles together (this occurs in 98 percent of all TDS contaminants), then a truly amazing event occurs. The TDS particles literally transmute back into their base atomic original form, which is of course primarily hydrogen and oxygen atoms. This is why TDS contaminants in water tend to evaporate or actually "disappear" in water treated with "AquaVivos". This is especially true with water contaminated with free radical trihalomethanes (THMs), chlorine residues, and benzene-based petrochemical contaminants. In short, all potentially harmful contaminants in water are eventually broken up into completely water-soluble ions of hydrogen and oxygen by these "super colloids". Even ocean water with extreme TDS counts transmutes into fresh, potable water over time! This further explains why "AquaVivos" has anti-bacterial and anti-viral properties, as well as being a very effective cleaning agent with NONE of the harmful side effects of traditional household chemicals that are potentially deadly. This also explains why water treated with "AquaVivos" may help the body to remove dangerous toxins from the cells and tissues themselves.

AquaVivos Super Concentrated Enzymatic Water Enhancer is packaged in 8 oz bottles which can be used to further enhance 2500 gallons of our Crystal Blue Structured Water.

Simply add 2 DROPS of concentrate to 1 gallon of water immediately before running the water through our Crystal Blue Water Structuring Unit.

Then let the water stand for at least 4 hours in a dark and quiet place for best results.
