

Crystal Blue Ent. (the company), Agricultural Product Application Advisory, Disclaimer and Client Waiver of Liability

Because the Crystal Blue Ent. Technology makes all soil amendments (fertilizer, pesticides and water itself) more accessible to the plant, it is important to use less water, fertilizer and pesticide. Otherwise, there is a danger of ruining the crop due to over watering or using too much fertilizer or pesticide.

Each Crystal Blue Ent. Agricultural Unit purchased comes with a full 6 month or one full growing season money-back satisfaction guarantee promising that you will see greater crop yields and nutrient density with less soil compaction and need for fertilizers and pesticides.

All we ask is that you agree to follow our recommendations for use of the Crystal Blue Ent. Water Unit by completing, dating and signing this **Agricultural Product Application Advisory, Disclaimer and Client Waiver of Liability**.

Thank you

I hereby agree to carefully follow the above instructions for use of the Crystal Blue Ent. Agricultural Unit by reducing both water and soil inputs (water, fertilizer and pesticides) by at least 50% for the first 30 days or so after planting and then closely monitor my crop and make adjustments as required. I also agree to contact the Supplier immediately should any unexpected results show up that are cause for concern, or if I detect a need to adjust inputs.
